SECRET FACT

How GIANT the Sun really is

Only for the Little Planets Crew

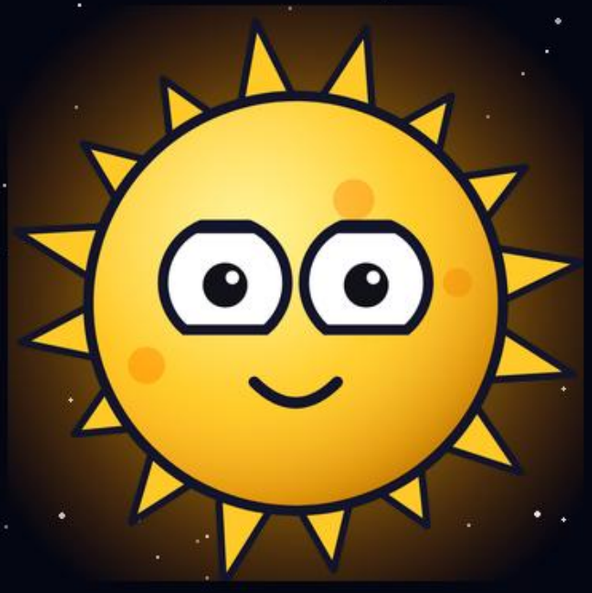

1. The Sun holds 99.8% of all the mass in the solar system: everything else together is just 0.2%.

2. It weighs about as much as 333,000 Earths, and about 1.3 million Earths would fit inside.

3. The Moon drifts about 3.8 cm (1.5 in) away from Earth every year (laser-measured since 1969).

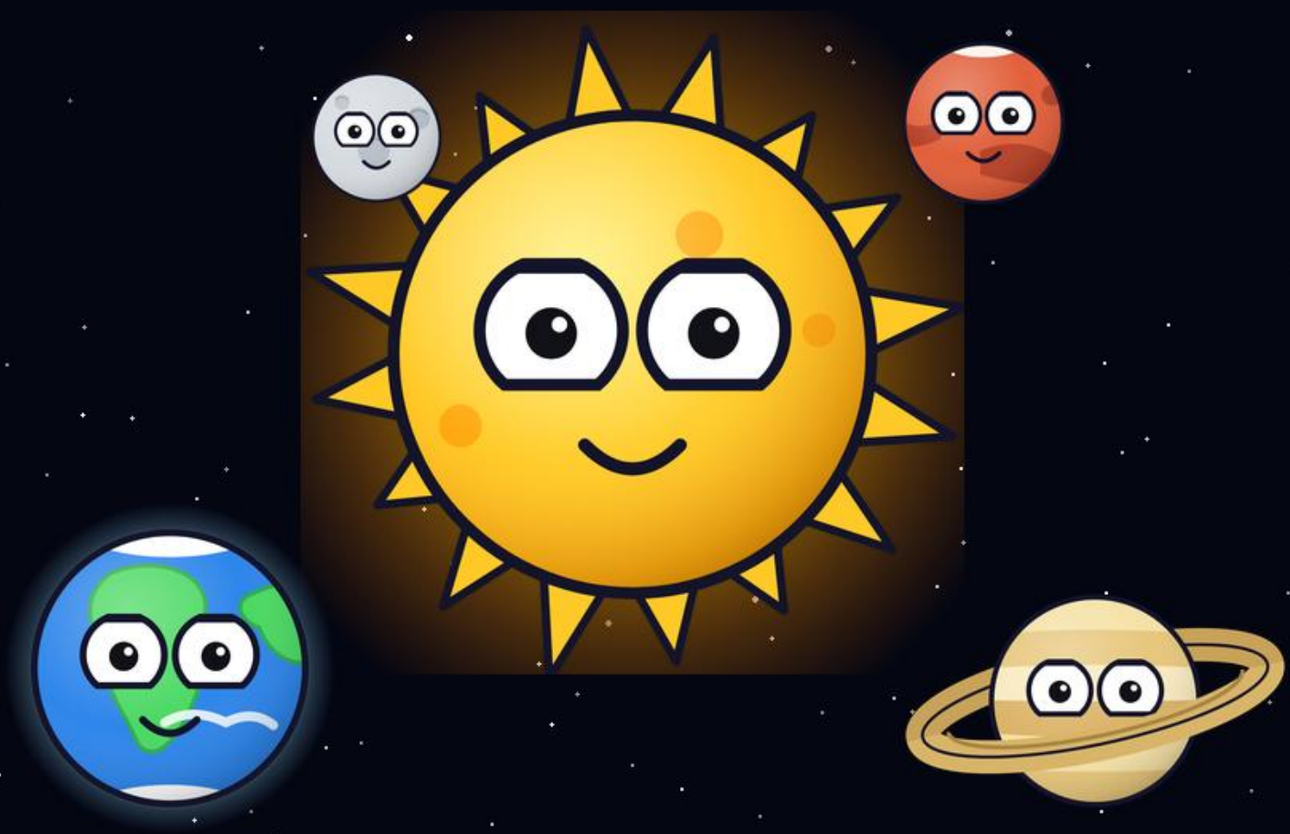

YOUR MISSION

Challenge: which other planet would you throw into the Sun? Reply
