

SECRET FACT

**How many stars there are
(and who names them)**

Only for the Little Planets Crew

1. With the naked eye, on a dark night, you can see about 3,000 stars.

2. With telescopes, we estimate more stars than grains of sand on all beaches.

3. The Sun is a medium-sized star: some stars are hundreds of times bigger.

**"He telleth the number of the stars;
he calleth them all by their names."
— Psalm 147:4**

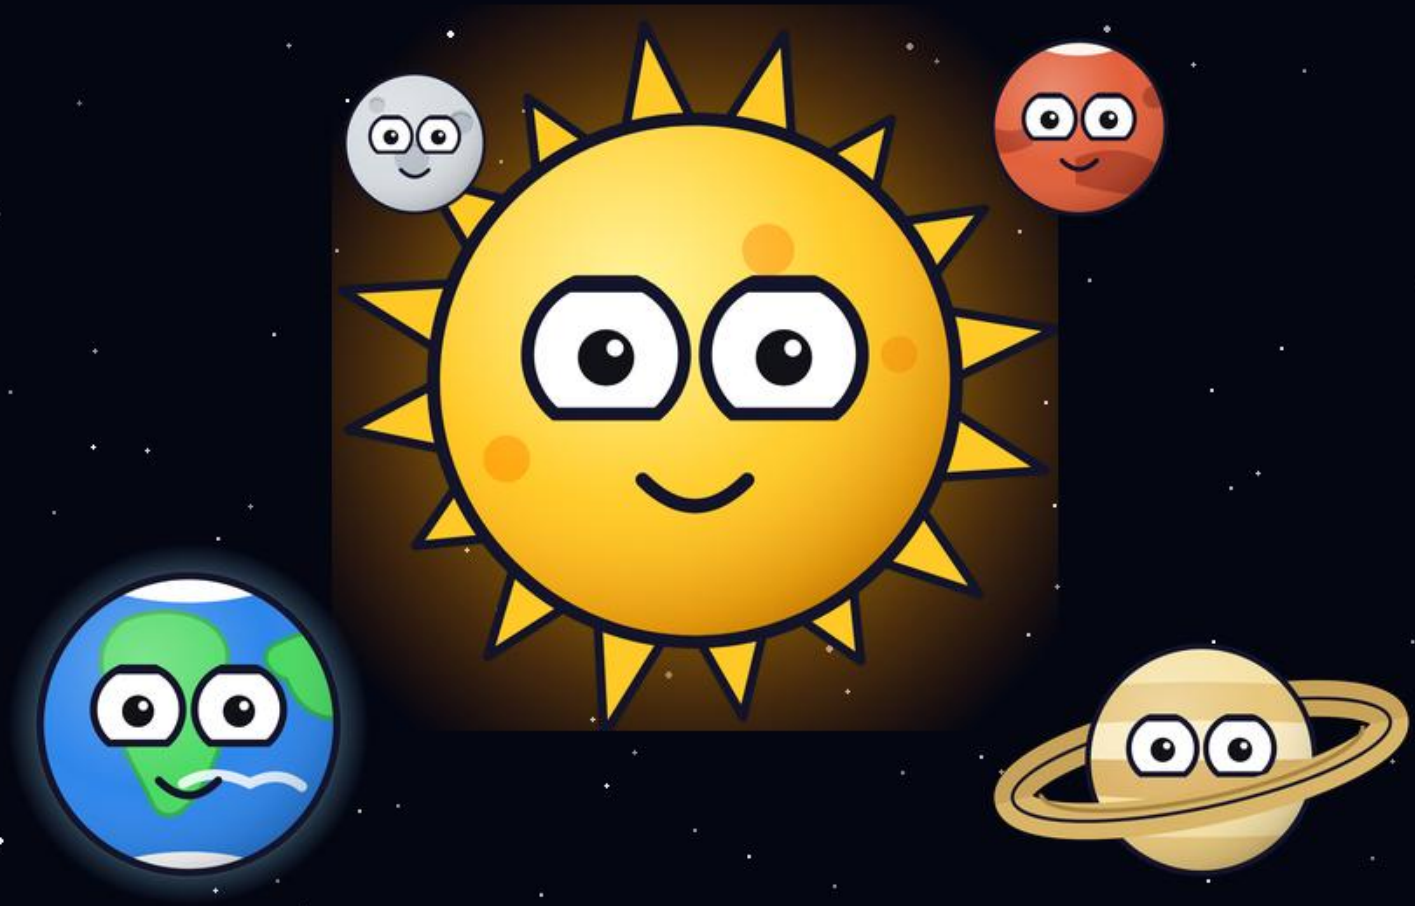

YOUR MISSION

Challenge: go outside tonight for 2 minutes and look up. How many did you count? Send me the number

Reply in this chat

WELCOME TO THE CREW!

**You're now one of the
Little Planets explorers**
