

MINI GUIDE TO THE PLANETS

Amazing facts about our Solar System

Little Planets

THE SUN

It is 109 times wider than Earth.

About 1.3 million Earths would fit inside.

Its light takes 8 min 20 s to reach us.

MERCURY

It is the closest planet to the Sun.

Its year lasts only 88 days.

430 °C by day and –180 °C at night.

VENUS

It is the hottest planet: ~465 °C.

Its day (243 days) is longer than its year (225).

It spins backwards compared to most planets.

EARTH

The only known planet with liquid water oceans.

71% of its surface is water.

Its atmosphere and magnetic field protect us.

THE MOON

It always shows us the same face.

It drifts about 3.8 cm farther every year.

12 people have walked on it.

MARS

It is red because of iron oxide (like rust).

It has the tallest volcano: Olympus Mons (~22 km).

It has two moons: Phobos and Deimos.

JUPITER

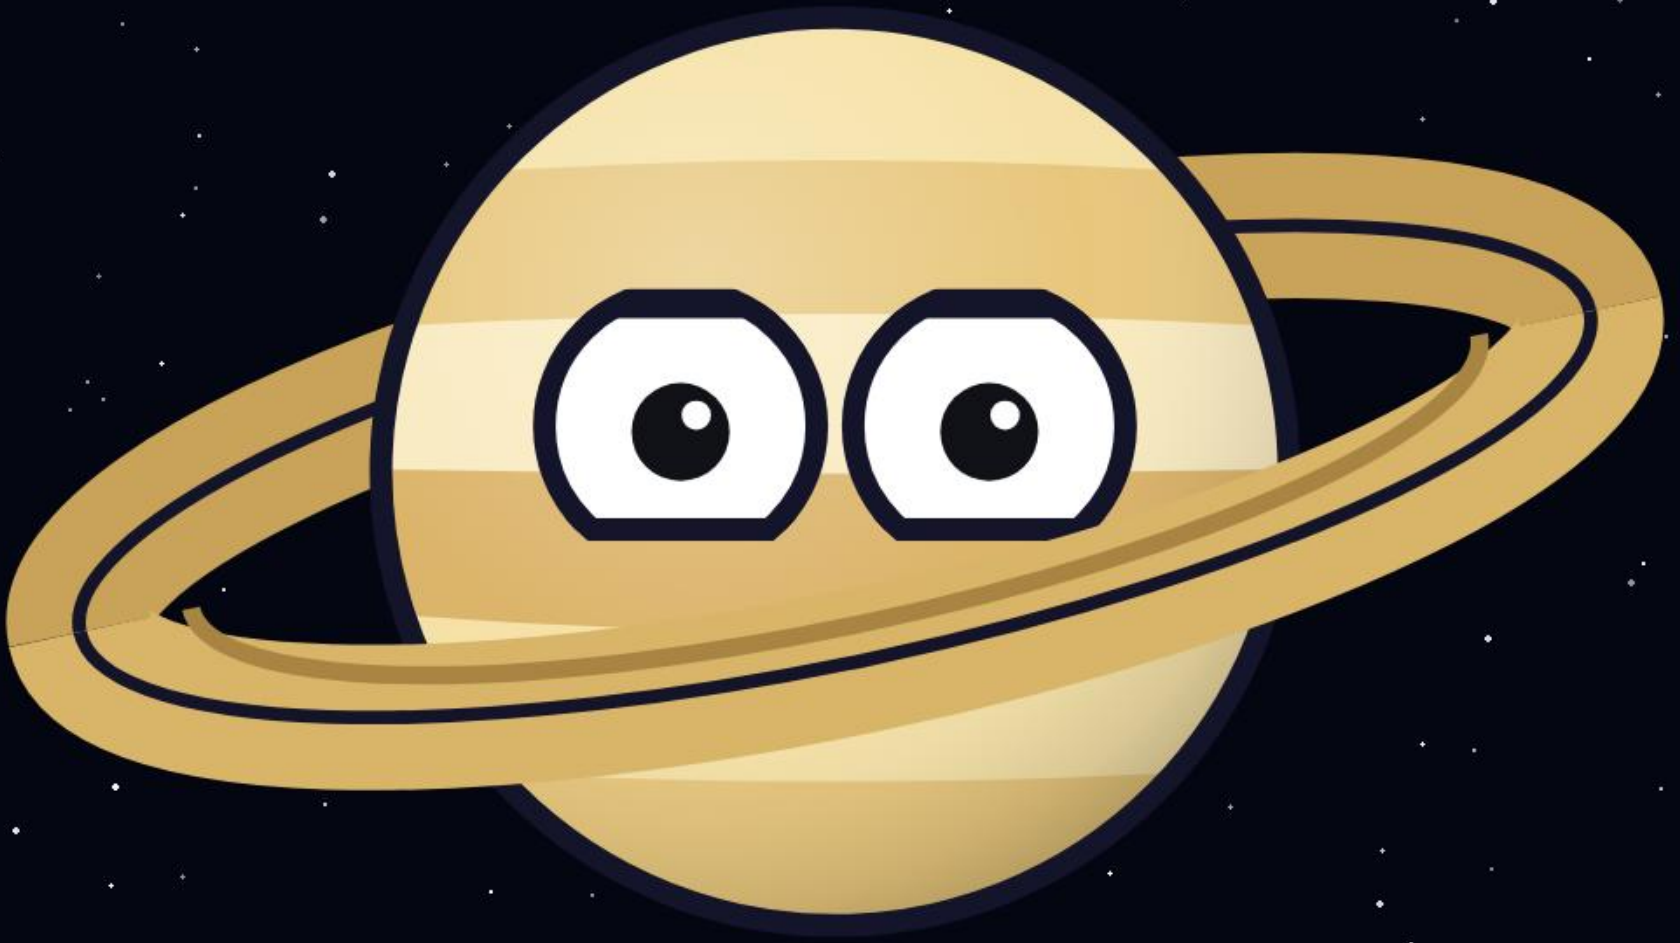

About 1,300 Earths would fit inside.

Its Great Red Spot is a storm bigger than Earth.

It has more than 90 known moons.

SATURN

It is so light it would float in a giant bathtub.

Its rings are made of ice and rock.

It has more than 140 known moons.

URANUS

It spins "on its side": tilted about 98°.

It has the coldest atmosphere: -224°C .

Its color comes from methane gas.

NEPTUNE

It has the fastest winds: ~2,000 km/h.

One year there lasts 165 Earth years.

It might "rain diamonds" deep inside.

PLUTO

It has a huge icy "heart".

It is smaller than our Moon.

Since 2006 it is called a dwarf planet.

**"The heavens declare the glory of God;
and the firmament sheweth
his handywork."**

Psalm 19:1 (KJV)
