SECRET FACT

The rain on each planet

Only for the Little Planets Crew

1. On Neptune the pressure is so high carbon could turn into diamond and "rain".

2. On Venus, sulfuric acid drops evaporate before reaching the ground.

3. The Sun has "coronal rain": plasma falling along magnetic fields.

"Who giveth rain upon the earth, and sendeth waters upon the fields."
— Job 5:10

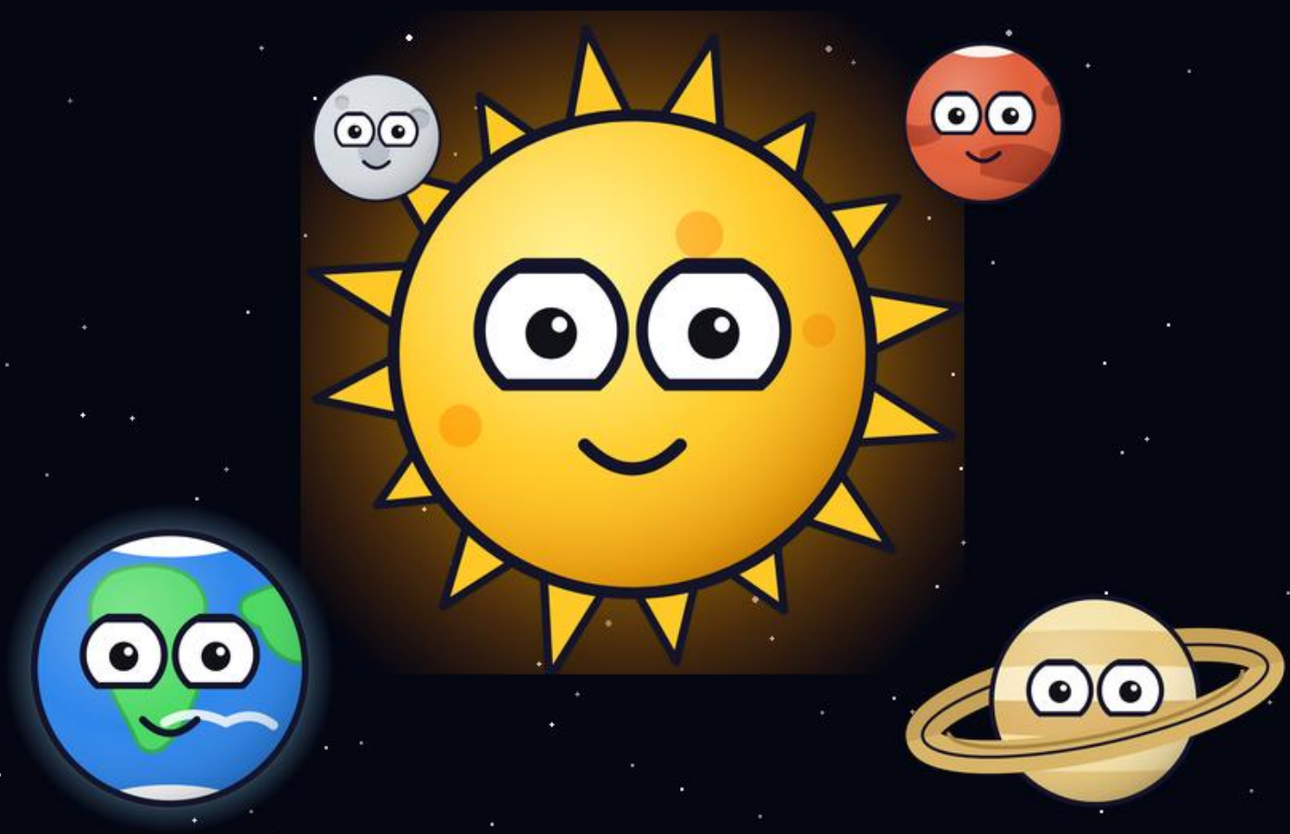

YOUR MISSION

Challenge: on which planet would you like to watch it rain? Reply

Reply in this chat

WELCOME TO THE CREW!

You're now one of the Little Planets explorers
