

SECRET FACT

The Sun in numbers

Only for the Little Planets Crew

1. Surface: about 5,500 °C — more than twice the hottest lava.

2. Core: about 15 million °C; that's where hydrogen turns into helium.

3. Size: about 1.3 million Earths could fit inside the Sun.

**"His going forth is from the end of
the heaven, and his circuit unto the
ends of it: and there is nothing hid
from the heat thereof." — Psalm
19:6**

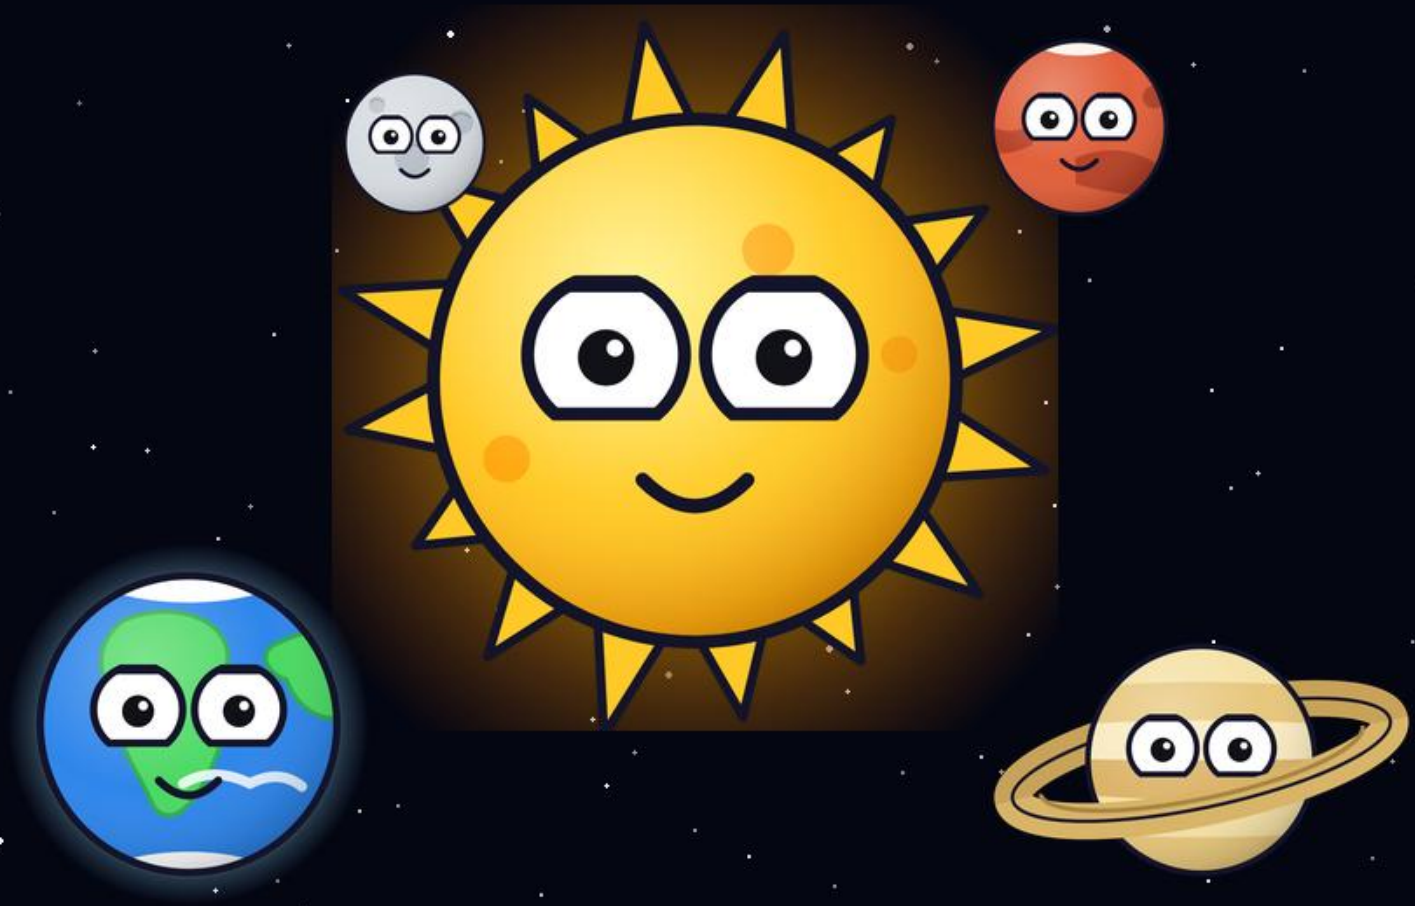

YOUR MISSION

Challenge: how many times hotter is the core than the surface? Reply
